49. Be aware of the mountain area's economic potential.
50. Be aware of the mountain area's social and political implications.
PRACTICAL ADVICE

The Panoramic Road, the "Dramatic Ring" is completely paved. A great deal of the road lies along narrow, winding roads. Therefore, drive carefully and be aware of the road. In case of occupying traffic, it may happen that you have to give way in order to let oncoming vehicles pass. In winter, the road is usually closed due to weather conditions. The best time to travel is between May and October. However, you will want to avoid any weather that is too extreme. After the winter months or heavy rains, some roads and road edges may be dangerous or even impassable. Particular attention to particularly narrow passageways is required when driving through the Black Canyon. The route is not suitable for large buses. Note: the Panoramic Road is subject to road disturbances. Please be prepared to face unexpected situations. Be prepared to face unexpected situations.

DURMONT NATIONAL PARK

The Durmont National Park was established in 1912 and covers five municipalities: Zalakaros, Füzesabony, Pháncs, and Miklová. It has an area of 200,000 hectares, which includes some of the most important natural areas in Hungary. The park forms a unique ecological system, characterized by a rich variety of plant and animal species. It is a valuable and unique natural area, providing a variety of ecological and landscape values. The park is managed by the Hungarian National Park Service.

ZALAKAROS

Zalakaros is the center of the Zalakaros Mountains. It is an important tourist destination in Hungary. The town has a population of 10,000 inhabitants, and it is located in the Zalakaros Mountains. The town is known for its warm, sunny climate and its diverse landscape, including forests, meadows, and lakes.

The Zalakaros Mountains are a part of the Transdanubian Mountains, which run along the southern border of Hungary. The mountains are characterized by a variety of landscapes, including forests, meadows, and lakes.
